

## ***Message from our Master***

*I'm Ali, a fourth-generation knifemaker. Two masters raised me. Thanks to them, I learned both the traditional and modern styles of this work and by combining these styles, I made changes according to today's conditions and created new products. My great-grandfather and grandfather were hot iron masters, they made products using traditional methods. My father took the knife issue to a higher level by adding innovation to this business.*

*Now, I am working on a multi-layered Damascus. Especially, I use 15n20 and K720 Carbon Steel as material. On the other hand, I am beating by hand using completely traditional methods without using a Rammer. I use Damascus as middleware. Then, I make raindrop ladder patterns and Turkish twists, which are generally made worldwide.*

*One of my greatest wishes is to learn the method of extracting steel (Turkish name diced) from the ore with the quarry system you have used, use it with the Damascus I have made, and add innovations.*

of masters for  
"4 generations"**

## Story behind the scenes

Masters for 4 Generation

We have started to design and produce knives in 1920 thanks to our grand grandfather. The experience and creativity are passed on from generation to generation. We saw the knife as a fingerprint and aimed to make a human-specific knife. Today, we are a solid brand in Turkey among famous chefs and their kitchens.

## Our key point is the quality

The knife is the limb of the body.

The knife is one of the oldest tools in human history. The knife, one of the few most essential objects still used by human, has not changed much. A second object is not of equal importance in everyday use. With that perspective, we're working hard to design another limb of the body.

## As unique as fingerprint

Designing unique products

We identify the product suitable for each person by asking the critical questions we ask before starting production. After usage trials, we started to design the best knife for the user. By using manual production, we are able to obtain unique products.

## Target: Learn and Improve

Never-ending Improvement

We are aware of the importance of lifelong learning. For this reason, we have been working day and night for 4 generations, and we always aim to take our business one step further. We never believe that our existing knowledge is enough, we conduct research all over the world and work with world-renowned masters.

## From steel to jewelry

Be with us to increase our knowledge

We believe that the product we produce is as valuable to people as jewelry. We hope to receive training and work with you, especially those who excel in using steel, to design this kind of jewelry. We believe in the value of sharing your knowledge with us and guiding us.
